Back in 2014 we chose to purchase software allowing us to build and use what we call digital inspections. Our technicians all have a tablet just for this purpose. We designed the inspections to mirror how we have always checked over cars from top to bottom. The digital aspect allows us to take pictures and record notes then share it with the car owner via text or email. Good communication has always been a top priority for us and we found this to be an excellent tool.
