While oil changes are one of the most basic things we offer it is also one of the most important.

When in for this service we are able to take a look at the general condition and keep an eye on maintenance needs. All fluid levels are checked, tire pressures set and exterior lighting function confirmed. It sounds old school but we still set the mileage at 3,000 for standard oil and 5,000 for synthetic. There are several reasons for this but most importantly and like everything else we suggest is because that is how we take care of our own cars.
