**Tires are the one and only thing between your car and the road. We take tires and tire repairs seriously. Tires that are punctured are dismantled and inspected for damage then repaired using a patch plug. Plugs are bad, patches are better and patch plugs are the only accepted repair by the national rubber association. “A plug by itself or a patch by itself is not an acceptable repair because the plug does not permanently seal the inner liner and the patch does not fill the void left by the penetrating object, which allows water to enter the body of the tire and starting corroding the steel belts.” This is why we use patch plugs exclusively.**
